Committee on Range Bibliography of Southern Section,
Society for Management

This bibliography is the third of a series inaugurated in 1963 for the purpose of recording publications that deal importantly with the forest ranges of the South, and with the livestock and wildlife utilizing this vast resource.

For the first number of the series⁴, the compilers appraised all literature that had accrued through 1961. The second bibliography⁵ spanned the years 1962-1967. The present list brings up to date the coverage of publications which--with allowance for errors of judgment and inadvertence--should prove most useful to the diverse interests of land managers, stockmen, conservationists, scientists, teachers, and students.

As before, the southern range area is considered to extend from eastern Oklahoma to Virginia, and from southern Kentucky and Missouri to the Gulf of Mexico. Because pasture commonly augments the diets of cattle that subsist chiefly on range forage, pertinent publications on supplemental pastures are included.

The list contains over 950 entries, as compared to 650 for the previous compilation. We think that the increase is chiefly due to expansion both of research and of general interest. Much of the gain is in wildlife publications, which have become so numerous as to require subdivision of that category.

Except for amplification of the wildlife section and minor changes in other sections, the classification is the same as that used heretofore. Publications relating to more than one subject are under the topic of principal concern. Cross-references are suggested at the beginning of some sections.

Sources consulted included books, periodicals, publications of the U. S. Government, and

of State agricultural experiment stations, releases of regional organizations and private foundations, and bibliographies with abstracts. Periodicals searched included:

Agronomy Journal
American Forests
American Journal of Botany
American Midland Naturalist
Botanical Gazette
Botanical Review
Crop Science
Ecology
Ecological Monographs
Economic Botany
Forest Farmer
Forests and People
Forest Science
Gulf Coast Cattleman
Journal of Animal Science
Journal of Forestry
Journal of Range Management
Journal of Soil and Water Conservation
Journal of Wildlife Management
Soil Science
The Cattleman
